

EVmatch Software

EV Charging Solutions

PRODUCT DESCRIPTION

EVmatch offers the most affordable and flexible commercial EV charging management platform. In combination with low-cost hardware, EVmatch's easy-to-use software provides you with full control over charging station access and utilization.

- Management platform allows site hosts to install affordable charging and monetize stations to earn revenue and attract customers or tenants
- Customize station price and choose to restrict access or open up to the public
- Leverage existing WiFi to save on networking costs
- App and website platforms enable more EV drivers to find and reserve charging sessions

WHY EVMATCH?

Reservation System

Maximize utilization and revenue. Users can check station availability, make reservations in advance, or park and book a session on the spot

Secure Payment Processing

Customize price with hourly or per kWh rates. Recoup all electricity costs, earn revenue to cover up-front costs, and see profit grow as more EVs hit the road

Control Station Access

Create user groups and distribute access codes. Software-hardware integration means only authorized paying customers use stations

30-60% More Affordable

Affordable hardware and software fees mean you save money with EVmatch. Our solution taps into your existing WiFi network so no data plan is needed

EVMATCH ADMINISTRATOR FEATURES

- Host Listing Creation & Management** > Input location and station details including availability, price, and integrated device keys. List multiple stations and set price per hour or kWh
- Charging Station Management** > Restrict charging access to specific drivers or offer public charging. Receive session notifications
- Payment Processing and Fees** > Drivers pay a 20% EVmatch transaction fee per session. Site host receives monthly payouts. Flexible software subscription terms ranging from 1 month to multiple years
- Group Management** > Offer group-level access, pricing, and hours of availability through codes generated in the admin dashboard
- Idle Fees** > Set custom fees to kick in after charging session ends to enforce reservations and optimize station utilization. Choose the length of the post-session grace period before idle fees begin accruing
- Reports** > Review and download daily and monthly charging session reports via JuiceNet Dashboard
- Load Balancing** > Limit maximum power load for sets of charging stations. Monitor current load and review load profiles. Save on electrical infrastructure investments by sharing circuits

DRIVER FEATURES

- Search map and apply filters
- Session notifications
- Review history of charging sessions
- Reserve and pay for charging sessions on phone, tablet, or computer with credit card, Apple Pay, or Google Pay. App available for iOS and Android
- Start sessions with the app
